## Quality, Health, Safety & Environment (QHSE)

### GRADE Refrigeration LLC

#### Responsibility for Quality, Health, Safety and Environment

“Engineering for a better world”: This GEA GRADE Refrigeration LLC claim represents the group’s key value proposition. We prudently shape and design our value creation processes and assist our customers in their endeavors to ensure sustainable management and the protection of the natural environment by offering them more and more efficient products and process solutions.

- Compliance with all legal and industry requirements, applicable regulations and national standards
- Integration of Quality and HSE in our business strategy as well as in the daily processes involving business partners and other stakeholders
- Continuous monitoring and improvement of our QHSE systems, performances and impacts by evaluating our objectives to implement appropriate, sustainable corrective and preventive actions
- Identification, analysis and effective control of all quality, health, safety and environmental opportunities and risks in our business activities
- Further development of safe, efficient and environmentally sound technologies, tools and procedures
- Development and implementation of programs for economic, ecological and social sustainability

#### Quality

- Further development of safe, high quality and environmentally sound products and services to secure and improve market presence and customer satisfaction

#### Health protection

- Further development and expansion of GEA GRADE Refrigeration LLC Care health management
- Introduction of new programs for the prevention of occupational diseases

#### Occupational safety

- Creation and continuous further development of safe and healthy working conditions for all employees, business partners and third parties
- Definition and active pursuit of measures to prevent disturbances and to adequately manage emergencies, incidents and impacts

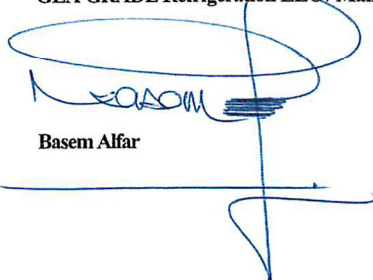

#### Environmental protection

- Prevention of environmental accidents and pollution
- Reduction of CO<sub>2</sub> emissions and waste
- Further development of resource-saving products and services
- Responsible use of natural resources, involving business partners and other stakeholders
- Promotion of sustainable and responsible procurement, including avoidance of conflict materials from conflict regions
